

Sustainable Fuels from CO₂, H₂O, and Carbon-Free Energy

Tuesday May 4, 2010

Faculty House, President's Room Suite, Columbia University, New York, NY
West 116th Street between Amsterdam Avenue and Morningside Drive

What technologies can be used to recycle CO₂ into carbon-neutral liquid hydrocarbon fuels (synthetic gasoline, diesel, alcohols, etc) using renewable or nuclear energy? What is the state-of-the-art? At what prices can such fuels be produced? Can they compete against fossil fuels and biofuels?

<u>Time</u>	<u>Presentation</u>	<u>Topic</u>
9:30 am	Welcome and Introduction Klaus Lackner (<i>Columbia University</i>) and Mogens Mogensen (<i>Risø National Laboratory</i>)	
9:50 am	Capture of Carbon Dioxide from Ambient Air for CO₂ Recycling Klaus Lackner, <i>Ewing-Worzel Professor of Geophysics, Head of Dept of Earth & Environmental Engineering, and Director of the Lenfest Center of Sustainable Energy, Columbia University</i>	CO ₂ capture
10:30 am	Carbon Dioxide Capture Using Nanoparticle-based Ionic Materials Alissa Park, <i>Lenfest Junior Professor in Applied Climate Science, and Associate Director, Lenfest Center for Sustainable Energy, Columbia University</i>	CO ₂ capture
11:00 am	The Columbia Energy Frontier Research Center: Toward Efficient and Inexpensive PV Jim Yardley, <i>Professor, Department of Electrical Engineering, and Managing Director, Energy Frontier Research Center, Columbia University</i>	Photovoltaics
11:30 am	Photochemical CO₂ Reduction: Current Status and Challenges Etsuko Fujita, <i>Brookhaven National Lab</i>	Photochemical conversion
12:00 pm	Lunch (to be served)	
1:30 pm	High Temperature Solar-driven Thermolysis of CO₂ Reed Jensen, <i>Los Alamos Solar Energy LLC</i>	Thermolytic H ₂ O/CO ₂ splitting
2:00 pm	Solar-driven H₂O/CO₂ Splitting via Thermochemical Cycles Rich Diver, <i>Sandia National Lab</i>	Thermochemical H ₂ O/CO ₂ splitting
2:30 pm	Production of Synthetic Fuel by Electrolysis: Potential and Challenges Mogens Mogensen, <i>Research Professor, and Director of Strategic Electrochemistry Research Center, Risø National Laboratory for Sustainable Energy, DTU, Denmark</i>	Electrolytic H ₂ O/CO ₂ splitting
3:00 pm	Production of Synthesis Gas by High Temperature Electrolysis of H₂O and CO₂ Carl Stoots, <i>Idaho National Lab</i>	Electrolytic H ₂ O/CO ₂ splitting
3:30 pm	Numerical Simulation of a High Pressure Water Electrolysis System Masahiro Kawaji, <i>Professor, Dept of Mechanical Engineering, City College of New York</i>	Electrolysis
4:00 pm	Solid Oxide Electrolysis Cells: Long-term Durability Sune D. Ebbesen, <i>Scientist, Fuel Cells & Solid State Chemistry Division, Risø National Laboratory for Sustainable Energy, DTU, Roskilde, Denmark</i>	Electrolytic H ₂ O/CO ₂ splitting
4:30 pm	Recycling CO₂ by Electrolysis of H₂O and CO₂: Economics and Electrode Materials Christopher Graves, <i>PhD Student, Columbia University, New York, New York</i>	Electrolytic H ₂ O/CO ₂ splitting

This event is free, but RSVPs are required. To register, please email Carey Russell (crussell@ei.columbia.edu) or visit: http://calendar.columbia.edu/sundial/webapi/get.php?vt=detail&id=40808&con=standalone&br=ei_brand
